

Iago Misko

Senior DevOps Engineer | Senior Site Reliability Engineer

✉ misko.iago@gmail.com | ☎ +49-1627052285 | 📍 Berlin, Germany | 🔗 [linkedin.com/in/iago-misko/](https://www.linkedin.com/in/iago-misko/)

PROFILE

Senior DevOps/SRE Engineer with 15+ years operating infrastructure spanning legacy systems to Kubernetes, GitOps-driven CI/CD, and full observability stacks. I build resilient, self-service platforms on AWS and GCP, provisioned and managed through Terraform, that help engineering teams ship faster while meeting SLOs and reducing MTTR. Trilingual (Portuguese, English, Spanish), with experience ranging from vendor engagements supporting global telecom operators (Vodafone, América Móvil, Telefónica), to a direct engagement embedded at Pinterest, to high-growth startups across Cybersecurity, HR Tech, and AI.

SUMMARY OF EXPERIENCE

- **Communication & Stakeholder Management:** Translate complex technical architecture into clear, actionable guidance for engineering, management, and non-technical stakeholders alike.
- **Scalable Infrastructure:** Architect and manage infrastructure across the full business lifecycle, from lean startups to massive global enterprises.
- **Operational Excellence:** Administer systems and build infrastructure-as-code (IaC) and automation tooling that eliminate manual toil and increase system reliability.
- **Cloud & IaC:** Provision scalable, resilient environments on AWS, GCP, and Terraform; operate Kubernetes, Helm, and ArgoCD for GitOps-driven, cloud-native deployments.
- **Automation & CI/CD:** Design robust CI/CD pipelines and automate operations via Shell scripting (Bash, Zsh, Ksh) to streamline software delivery and deployment.
- **Systems & Security:** Administer Linux and Unix systems across high-availability sectors including Cyber Security and Telecommunications.
- **Site Reliability & Observability:** Define and operate SLOs, error budgets, and on-call/incident response, using observability stacks including Prometheus, Datadog, Grafana, Nagios, Zabbix, Graylog, Elasticsearch/OpenSearch, and Kibana to reduce MTTR.

PROFESSIONAL EXPERIENCE

Nimbus AI

Senior DevOps Engineer

Feb 2026 – Present

Berlin, Germany

- Migrated infrastructure to Terraform, eliminating configuration drift and establishing a fully version-controlled, auditable infrastructure baseline for PostgreSQL and Kafka-backed services.
- Built VPC networking, peering, and routing with AWS ALB-based DNS and TLS termination, hardening the platform's network security and connectivity.
- Migrated CI to GitHub Actions and adopted Kustomize for Kubernetes configuration management and EKS Auto Mode for node autoscaling, enabling self-service deploys and parallel builds that reduced release friction across teams.
- Replaced Datadog with an open-source observability stack (Grafana, Prometheus, OpenSearch, Tempo, OpenTelemetry) and centralized secrets management using AWS Secrets Manager, cutting monitoring costs by 60% while improving audit compliance.
- Mentored 9 team members on DevOps tooling and workflows, strengthening the team's DevOps culture.

PowerUs

Senior Site Reliability Engineer

Jan 2025 – Jan 2026

Berlin, Germany

- Migrated the platform from DigitalOcean to AWS, introducing Kubernetes and Helm charts with Horizontal Pod Autoscaling (HPA) and Karpenter-based node autoscaling to standardize deployments and improve scalability and reliability.
- Configured VPC networking, peering, and routing with nginx-based ingress, TLS termination, and Route53 DNS, closing latency and security gaps across the platform's network layer.
- Replaced DroneCI with GitHub Actions and adopted ArgoCD for GitOps-based continuous deployment, increasing deployment frequency from ~10 to 200+ releases per month.
- Implemented monitoring and alerting using Datadog across Kubernetes and RabbitMQ messaging infrastructure, and a Zero Trust network security model using Cloudflare with centralized secrets management via HashiCorp Vault, reducing incident response time and strengthening the platform's security posture.

Perseus Technologies

Senior DevOps Engineer

Mar 2022 – Dec 2024

Berlin, Germany

- Optimized infrastructure and PostgreSQL database configuration, decreasing application deployment and start-up time by 40%.

- Established VPC networking, peering, and routing with nginx-based ingress, TLS termination, and Route53 DNS, giving the platform a consistent, auditable network architecture across environments.
- Implemented automated certificate self-renewal using HashiCorp Vault, eliminating manual certificate management and expiry-related outages.
- Standardized CI pipelines using GitLab CI and Helm for Kubernetes deployments, and configured Horizontal Pod Autoscaling (HPA) to handle variable workloads, simplifying pipeline maintenance across teams.
- Automated backup and restore routines and built custom monitoring and alerting using the ELK stack, Grafana, and Prometheus, reducing recovery time and improving visibility into platform metrics.

Pinterest (Contractor by BairesDev)

Aug 2021 – Jan 2022

Senior DevOps Consultant

Remote

- Led automated deployment of weekly production releases, implementing a git branch-cut and code-freeze process that reduced deployment time and increased release accuracy.
- Implemented custom alerting on CI job status and applied performance tuning across development, testing, and production environments, improving pipeline visibility and system efficiency.
- Mentored 5 team members on DevOps techniques, supporting adoption across deployment and testing workflows.

Netcracker Technology

Jan 2020 – Jul 2021

Technical Operations Manager & Lead DevOps Engineer

São Paulo, Brazil

- Led a full-stack telecommunications transformation program as Technical Operations Manager, managing and mentoring a 5-person operations team while facilitating stakeholder meetings and defining operational improvements.
- Reviewed processes across client-managed operations accounts, identifying operational gaps and improving operational standards; mentored client teams and delivered documentation in English and Spanish.
- Automated production start/stop and secrets backup/restore routines, deploying Zabbix, Graylog, and Elasticsearch to monitor PostgreSQL, Kafka, and RabbitMQ services, cutting operational overhead across client environments.
- Led a full platform migration from on-premises to cloud infrastructure, transitioning operations to the client's team after contract completion.

Prodabel

Jul 2019 – Dec 2019

Senior DevOps Engineer

Belo Horizonte, Brazil

- Automated Docker Swarm cluster management, including Traefik-based ingress routing, TLS certificate handling, and secrets backup/restore routines, reducing manual operational overhead; led approximately 2 major software releases per week over 6 months while mentoring teams on automation techniques.

Inatel

Nov 2018 – Jun 2019

DevOps Specialist

Santa Rita do Sapucaí, Brazil

- Led implementation of automated tooling for non-functional test case execution, increasing test accuracy by 30% and improving execution time; built test documentation and mentored the testing team on automated testing standards.

Amdocs

Feb 2013 – Oct 2018

DevOps Engineer

São Carlos, Brazil

- Designed, configured, and maintained GCP and AWS environments across the full product lifecycle for enterprise clients including Vodafone, AT&T, Telefonica, and América Móvil, ensuring uninterrupted service across large-scale telecom deployments.
- Developed Python scripts to bridge WebLogic Scripting Tool (WLST) with KSH, automating integration between CRM and Ordering WebLogic instances; automated a previously manual environment provisioning process, led a full platform migration from Unix to Linux, and built a middleware integration tool with automated account-expiration checks and environment self-tests.

EDUCATION

Instituto Federal de Educação, Ciência e Tecnologia (IFSP)

2011 – 2013

Computer Systems Analysis and Development (Incomplete)

São Carlos, Brazil

Serviço Nacional de Aprendizagem Comercial (SENAC)

2008 – 2010

Associate IT Technician

São Carlos, Brazil

SKILLS

Cloud, Infrastructure & Networking: AWS, GCP, Terraform, Kubernetes, Helm, Kustomize, ArgoCD, Docker, Docker Swarm, Ansible, GitOps, HPA, Karpenter, EKS Auto Mode, VPC design, peering, routing, Route53 (DNS), TLS/certificate management, Traefik, nginx, AWS ALB

Data & Messaging: PostgreSQL, Kafka, RabbitMQ

Observability, Monitoring & Security: Prometheus, Datadog, Grafana, Tempo, OpenTelemetry, Nagios, Zabbix, Graylog, Elasticsearch, OpenSearch, Kibana, Zero Trust (Cloudflare), HashiCorp Vault, AWS Secrets Manager

Systems & Scripting: Linux, Unix, Git, Python, WebLogic Scripting Tool (WLST), Shell (Bash, Zsh, Ksh)
